

tcOptimizer

Buffer stock optimization

- OPTIMIZE OVERAGE
- PREVENT CRISIS
- SAVE TIME

- tcOptimizer is the revolutionary new clinical supply forecaster which can determine minimum buffer stock required at sites and depots
- tcOptimizer users can now, for the first time, find buffer requirements at global, country, site, and depot levels
- tcOptimizer can produce site minimums which change over time, e.g. dropping off as enrollment or other unpredictable events become complete

THE WORLD'S ONLY BUFFER STOCK OPTIMIZER

Use data to update resupply settings in tcVisualize; use optimizer values as floor and select multiplier for ceiling and initial

Data is instantly exportable to Excel for further analysis or use

View statistics like high, mean, 95th percentile, etc.

Finds the minimum thresholds for site stock and local country depots over your selected shipping lead times

Export all countries or sites with one click

Select a node to see the demand

See your maximum unpredictable demand over time
